

## Using vMix with HD-ENC-H264

### Procedure:

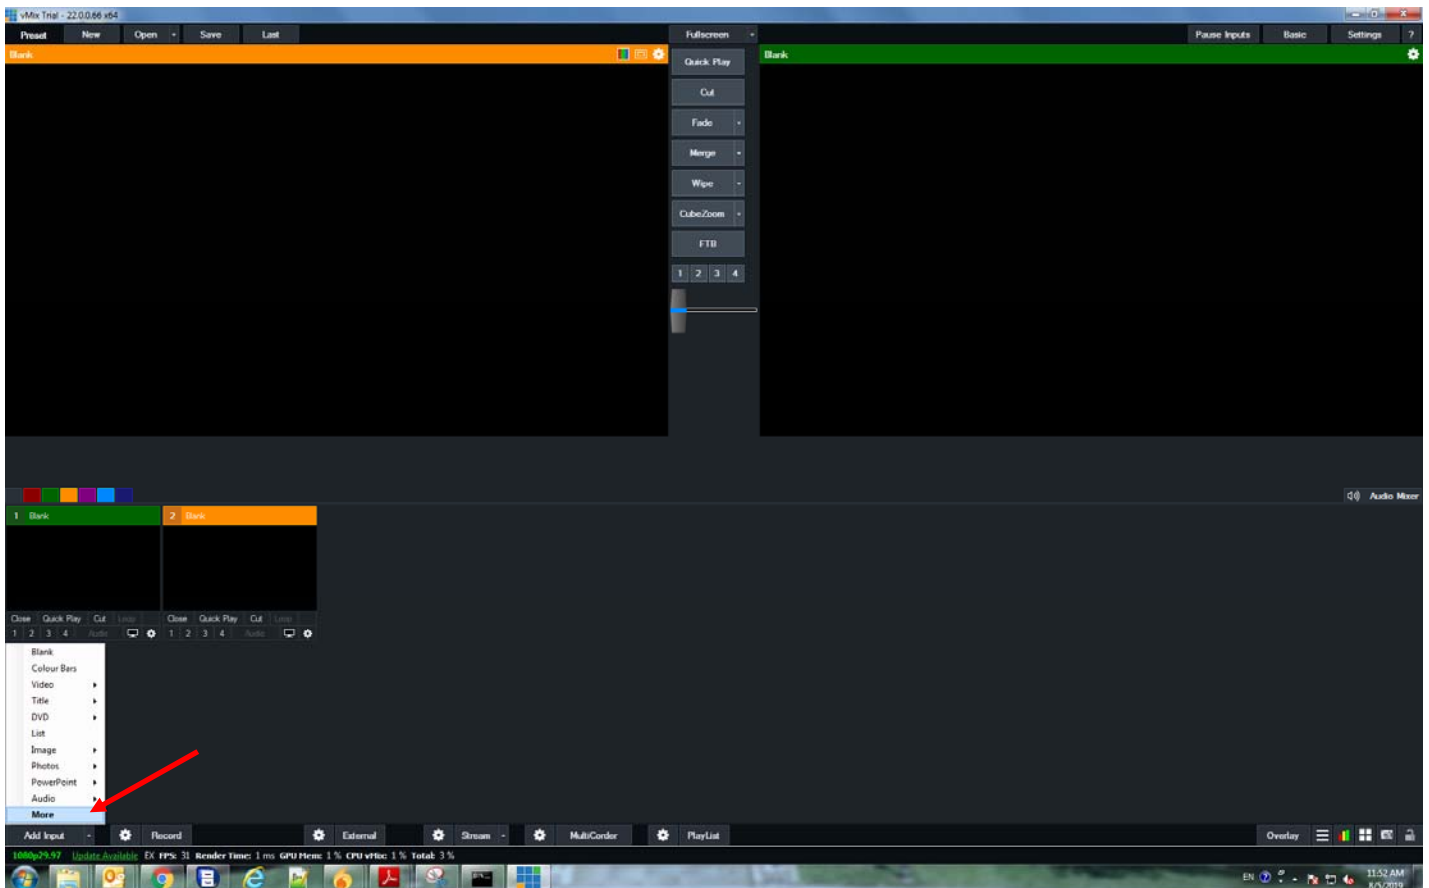

1. Power up the HD-ENC-H264 Encoder, connect an HDMI cable to the video source, and connect an Ethernet cable to the Ethernet switch / Router.
2. Following the user manual, configure the IP address of the HD-ENC-H264 Encoder to be in the same subnet as that of the PC.
3. Open a web browser, log in to the Encoder (default username and password are both "**admin**"), and copy the RTSP URL shown on the Status page. (By default, it should be ***rtsp://<ip address>/0***)

#### Main stream

Encoding Type:H264  
Encoding Size:1280x720@30  
Bitrate(kbit):1800  
TS URL: http://192.168.3.46/0.ts http://192.168.3.46:8080/0.ts  
HLS URL:Disable  
FLV URL:http://192.168.3.46/0.flv http://192.168.3.46:8080/0.flv  
RTSP URL:rtsp://192.168.3.46/0 rtsp://192.168.3.46:8554/0  
RTMP URL:Disable  
RTMP PUSH URL:Disable  
Multicast URL:Disable

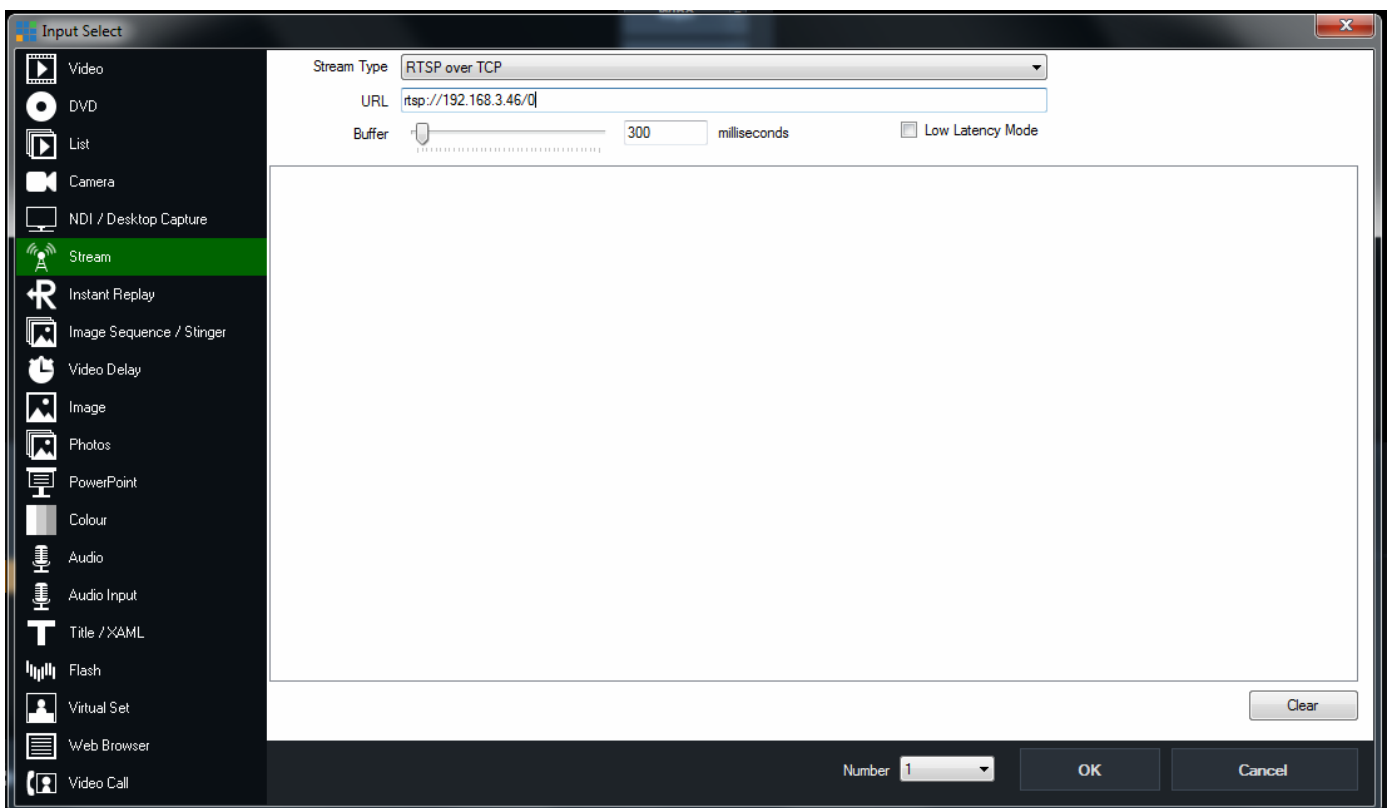

4. [Download](#), install and open vMix.

5. Click **Add Input** on the bottom left corner, select **More**.

5. Select **Stream** in the list on the left side of the pop-up window.

6. Select **RTSP over TCP** and paste the URL copied in step 3 to the **URL** textbox. Click **OK**.

- Click **Stream** on the bottom row of the main window, select the platform to stream the video on, and finish setting up the streaming platform.
