

PS/2 KVM Server Switch with OSD and RS232 Control Options

KEEMUX®

Control multiple PCs with one keyboard, monitor and mouse

- Control all network computers from one office.
- Auto scan all computers to catch system failures early.
- Improve manageability of your computer room – eliminate extra cables, monitors, keyboards and mice.
- Compatible with IntelliMouse®.
- Broadcast keystrokes to all computers for simultaneous shut-downs.
- Cascade smaller KVM switches together as your network grows-up to 128 ports.
- Available with OSD and/or RS232 Control options.
 - OSD not available on 2-port switch.

KEEMUX-P8-R-RS (Front & Back)

The KEEMUX® PS/2 KVM switch allows one keyboard, monitor and mouse to control multiple PCs (up to 128 computers). Dedicated internal microprocessors emulate keyboard and mouse presence to each attached PC 100% of the time so all computers boot error free.

Control Methods

Front Panel Interface

- Touch a button and be connected to a CPU or change modes of operation.
- LEDs indicate currently selected port and mode of operation.
- Hold in any button for more than two seconds to go into **Scan Mode**, **Broadcast Mode** or **Command Mode**.
 - **Normal Operating Mode**, the user can directly operate the selected computer with transparent presence of the NTI switch.
 - **Scan Mode** feature causes the switch to automatically and sequentially display the video from each powered on computer for 2-255 seconds.
 - **Broadcast Mode** feature allows the user's keystrokes to be sent to all powered on computers.
 - **Command Mode** allows the user to give instructions to the switch through their keyboard. Keystrokes are not passed to the computer.
